

Monitoring

Crankshaft Deflection Gauge

LEMAG®
CONTROLmag

An easy-to-use device to measure crankshaft deflection.

Product features

- Checks alignment and deflection on all types of engines
- Easy adjustment of gauge position
- Compact and robust construction
- Ready-to-use package with case
- Precision technology

CONTROLmag I

- Measuring range 60-300 mm
- Set of extensions
- Instrument case
- Article no. 21900002

CONTROLmag II

- Measuring range 60-500 mm
- Set of extensions
- Instrument case
- Article no. 21900042

Optional - rounded tips

- Article no. 21900000

Check alignment and deflection on all types of engines

A deflection gauge for checking distortion of crankshafts.

The use of LEMAG CONTROLmag I and II enables you to check the bearing alignment and deflection of the crankshaft.

Rounded tips for measuring cylinder wear (option)

LEMAG CONTROLmag I and II can also be used to measure cylinder wear.

To measure cylinder wear the hardened tips can be replaced with rounded tips that are available as an option.
